GitHub: github.com/henriquecaeiro

STACK

- ML/Data: Python, NumPy, Pandas, scikit-learn, PyTorch
- NLP: TF-IDF, n-grams, error analysis
- Metrics: Macro F1, Precision/Recall, Top-k
- Deploy: FastAPI, Uvicorn, joblib, Git
- Web: React, TypeScript, Node.js, Laravel, SQL

HIGHLIGHTS

- End-to-end projects (EDA, curation, training, API).
- Models: text classification, anomaly detection, regression.
- Focus on reproducibility and good project organization.

HENRIQUE CAEIRO

Junior ML / NLP Engineer

Professional Summary

Developer focused on Machine Learning and NLP, building models for text classification (ticket triage), anomaly detection (fraud), and regression (rent price estimation). Experience with data pipelines (EDA and curation), evaluation, and model deployment with FastAPI. Strong background in web development and API integration.

Projects (Machine Learning / NLP)

Ticket Triage (NLP)

English ticket classification to suggest the correct queue (e.g., Technical Support, Billing). End-to-end flow: EDA, curation (cleaning + short-ticket rule), TF-IDF baselines with classic models, error analysis (top confusions), and confidence profiles (strict / balanced / aggressive) to control when the model can auto-route.

Metrics: Macro F1: 0.7197 • Top-3 Acc: 0.8782

GitHub: github.com/henriquecaeiro/ticket-triage

Fraud Detection (Anomaly Detection)

Anomaly detection with an Autoencoder to identify suspicious transactions. Training on normal transactions only and choosing a threshold from the reconstruction error distribution. Evaluation with a confusion matrix and metrics to balance false positives and recall.

Metrics: F1: 0.6605 • Recall: 0.8744 • AUPRC: 0.7795

GitHub: github.com/henriquecaeiro/fraud_detection

Brazil Rent Price Estimator (Regression)

Rent price estimation in Brazil. EDA, cleaning, feature engineering, and training/validation with models like Random Forest, CatBoost, and Ridge, including an Ensemble/Stacking approach. Simple front-end to demonstrate how the model is used.

Metric: MAE: 2135

GitHub: github.com/henriquecaeiro/brazil-rent-price-estimator

Professional Experience

Confederação Nacional dos Municípios (CNM)

Full-Stack Developer • Apr 2025 – Present

- Maintain and deliver new features in legacy systems (React, TypeScript, PHP, Laravel, CodeIgniter, Python, APIs).
- Build new systems and migrate legacy modules to React and Laravel.
- Build Machine Learning and NLP models.
- Create UI/UX using Figma.
- Test and validate new features and manage version control.

Ameise Group

Junior Full-Stack Developer • Aug 2023 – Sep 2024

- Develop and maintain web applications (React, JavaScript, TypeScript, Node.js).
- Support serverless architectures on AWS to improve cost and scalability.
- Build RESTful APIs for system integration.
- Build reports and dashboards with Laravel and React consuming APIs.
- Participate in code reviews and agile practices (Scrum, Kanban).

NT Editora

Junior Front-End Developer • Nov 2022 – Apr 2023

- Implement and maintain components for web applications using React and JavaScript.
- Build and maintain online courses and educational games using React and JavaScript.
- Customize the front-end to match client needs and visual identity.

NT Editora

Front-End Intern • Apr 2021 – Nov 2022

- Assist in developing online courses using React and JavaScript.
- Develop and maintain educational games.

Education

Systems Analysis and Development — Universidade Estácio de Sá • 2020–2022

Additional Courses

- Advanced English — Fisk
- Full Stack (Node.js/Express, MongoDB, MySQL, REST APIs) — Udemy
- Advanced Web Development (HTML, CSS, JavaScript, jQuery, PHP) — Danki Code
- Machine Learning (Data Science, Machine Learning, Deep Learning) — Udemy
